

TENBEL

EMPOWERING A SUSTAINABLY CONNECTED FUTURE

Why We Exist

01

Tenbel's purpose is to solve complex problems, in the most straightforward way possible. We believe automation is the future, but we can't risk doing it a non-ecofriendly way

02

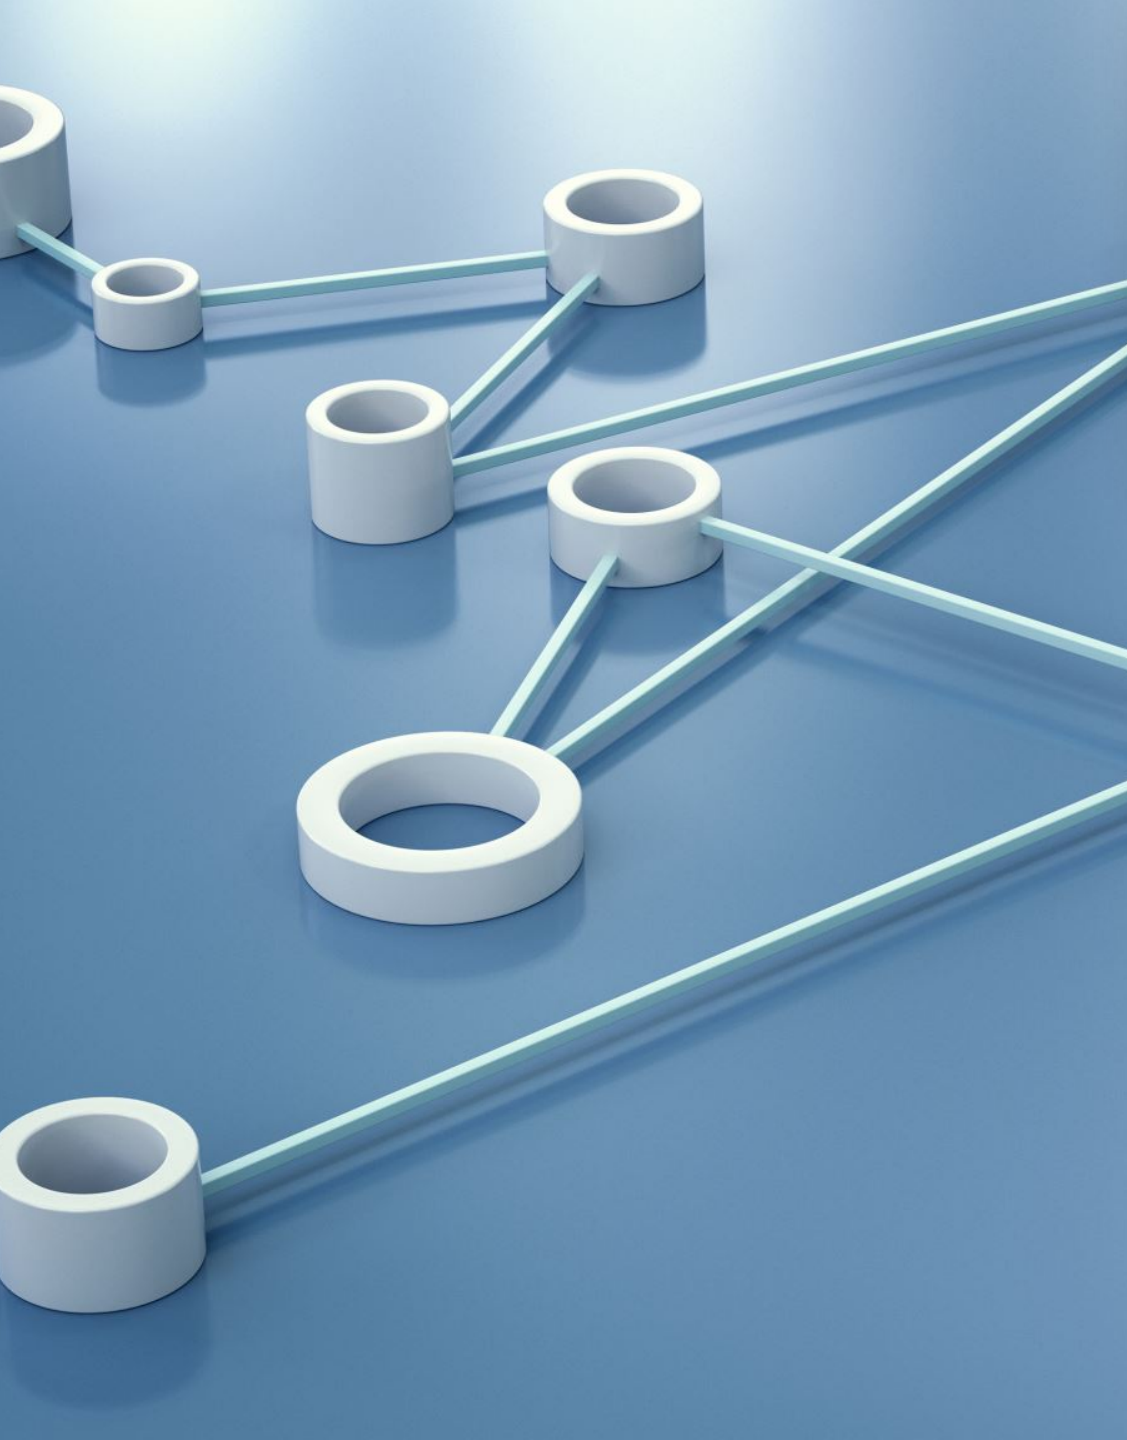

Everything we automate, optimize or create needs power. Our vision is to help not only create efficiencies in processes but to reduce the carbon footprint of the solutions we create to address your needs

03

Net Zero – a term we don't take lightly, we help you achieve your sustainability goals because we believe in gifting the future to the next generation

04

The right information - our consulting services build actionable information for companies that can help you grow your business, with the details that are relevant only to you

Our Product Lines

RF Antennas & Accessories

We provide cutting edge antennas and RF accessories for critical communications, enterprise networks, mobility, railways, IoT & private networks

Routers & Gateways

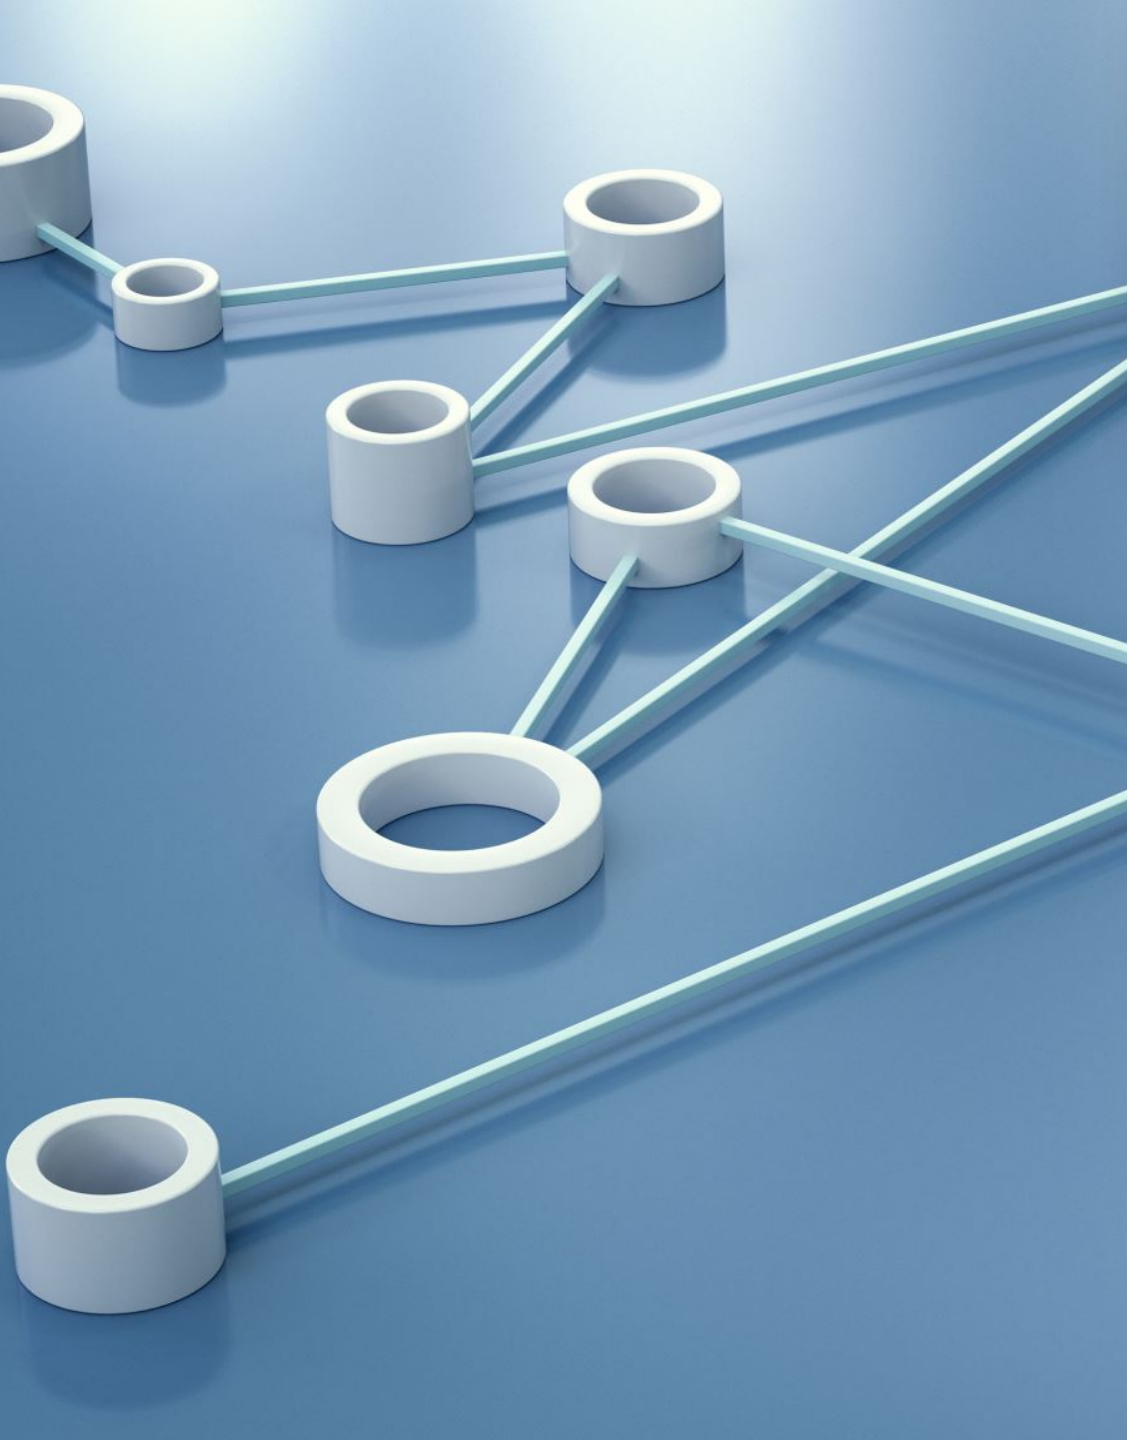

We provide mission critical grade IoT and enterprise grade network connectivity routers from our industry leading partners

Integrated Critical Communication Products

Our expertise in RF antennas, routers and wireless connectivity allows us to create industry leading critical communication equipment - such as our Emergency Comms Case & our Candy Box

RFID

RFID readers and tags best suited to your needs, whether for industrial automation, IoT, vehicle applications or medical use cases.

Our Service Lines

Wireless Network Design

Leveraging on our wireless background, we help you design the most cost efficient, high performing and sustainable networks on WiFi, cellular, LoRa and other global standards

Custom Antenna Design

Our design service line understands what you really need in an antenna and how to help you bring it to life. Design & build to cost from the outset

Consulting

Whether you are looking for a greenfield Go To Market strategy, or enhancing an existing model, our decades of expertise in IoT & wireless help you design the best approach

RFID Design & Deployment

We help you design the best tracking systems using RFID from tags, reader, ERP integration all the way to on site deployment.

Now available in multiple form factors
